

Single Cycle waveforms for Caustic 2 by Les Productions Zvon

This pack contains 30 single cycle waveforms for the PCMSynth of Caustic 2.

They are in the "natural" folder. You will notice that it contains 60 presets, the ones with their names ending with A are in the Loop Forward mode and those ending with B in the Loop Forward-Back mode. These sound brighter than the first ones.

Even if these waveforms can be used as is, they take a new dimension when shaped with the PCMSynth controls. I have included 3 simple example presets. Users who want to share their creations are welcome to send them to me and I will make them available on our website.

This pack is a zip file and not an APK. This means that it has to be installed manually. After downloading it, extract the zip file. This will give you a folder named "Zvon single_cycle". Copy this folder and all its content to the internal storage of your Android device. The best location is in the folder of the PCMSynth presets, here's the path: caustic/presets/pcmsynths/. But in fact, you can copy it where you want as Caustic's browser can access any location on the internal storage of your Android device.

The waveforms are all originals from Les Productions Zvon and they all have an acoustic origin. Their names are pretty explicit, for instance "Horn" is for Marching Band Horn. The only sample that was processed before making the single cycle waveform is "Photon" which is a female voice processed in Psychic Modulation Photon softsynth.

Type zvon in the search engine of Google Play (formerly the Android Market) to try our other expansion packs and visit our Caustic page: <http://lesproductionszvon.com/caustic.htm>

This sample pack can be used royalty-free in any piece of music. The only restriction is that you are not allowed to sell or distribute in any way the presets and samples, even in modified form, without our authorization.

For more details about the license please read the included "zvon_license.txt".
